cordeck.com

This truly unique, floating casino features an expansive single-level, 74,000 square foot gambling area housing nearly 1,500 slot machines, 50 table games, and a unique casino bar with breathtaking views of the Mississippi River. With extensive power and data wiring needed to support the high density of slots and tables, Cordeck's In Floor Cellular, Raceway System was the best application choice. This project had a tight schedule and an unusual design, specifying that the construction would take place on three floating barges. The Cordeck project team was in constant communication with field personnel to insure that all components were staged to arrive as needed according to an accelerated installation timetable.

"Cordeck's continued support throughout the project with multiple field reviews and letters to the governing authorities have been an integral part to the project's success."
