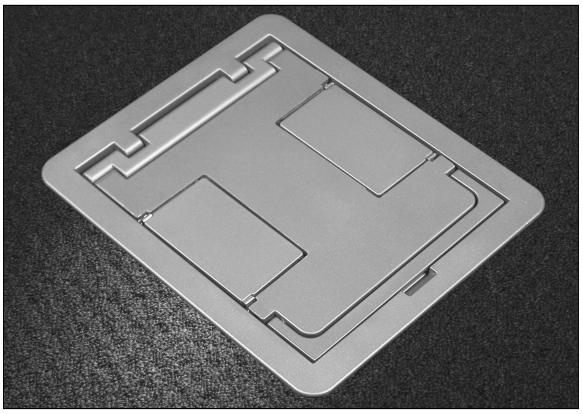
TOPGUARD™ A/V INTEGRATION

Service Fittings Supply the Versatile Workstation

The redesigned FloorPort Service Fittings provide flexibility in recessed and furniture feed applications. The enhanced design also increases the ease of use and color options while continuing to exceed UL scrub water requirements.

These covers are ideal for use in a wide variety of applications including casinos, educational facilities, airports, and commercial and institutional office buildings. The covers are UL Listed to U.S. and Canadian safety standards and are fire classified for use on N-R-G-FLOR Cellular Decking Systems in accordance with Floor-Ceiling Design Numbers D739, D832, and D858. Consult Cordeck for specific fire classified designs.



FloorPort Activation Covers for power, communication, and A/V.

FEATURES & BENEFITS

Full sized self-closing recessed handle. New handle design provides ease of opening yet remains out of the way when cover is closed.

Newly redesigned hinge and latch with enhanced durability. Hinge enables covers to open a full 180 degrees to lie flat on the floor for easy access to all compartments.

Flanged and flangeless styles. Flanged version is used on carpeted floors to prevent fraying of carpet. Flangeless covers are used in tile applications where the cover will be exposed to heavy loads, offering the right style for the right application.

Furniture feed options. Available with 1" trade size screw plug and one combination 1 ¼" and 2" trade size screw plug. Provides large capacity for feeding both power and communication cabling.

All metal construction. All components are die-cast aluminum to provide high durability and load capacity.

Two large egress openings. In addition to accommodating additional space required for cable egress, positive stops on egress blocks in open (up) position provide added protection to cables.

Expanded color options. Now available in durable powder coat painted nickel, bronze, brass, grey, and black, as well as a brushed aluminum finish which provides more aesthetic alternatives.

TopGuard Protection. An integral design which keeps out water, dirt, and debris from both the power and communication compartments eliminates the need to install additional gasketing.

Datacom connectivity options. Accepts industry standard and proprietary devices from a wide range of manufacturers to provide a seamless and aesthetically pleasing interface for voice, data, audio, and video applications at the point of use.
